PROFESSIONAL SUMMARY

Junior Product Owner with experience in requirement documentation, QA testing, and cross-functional delivery in live game environments. Delivered 70+ features and 110+ structured feedback outputs across 3 product launches. Proficient in leveraging AI tooling to improve documentation efficiency by up to 60%, with a strong interest in fintech and user-centric product design.

WORK EXPERIENCE

Junior Product Owner - Ripplesoft Limited

May 2025 - current | London, UK

Ripplesoft is a UK-based technology and software services company (Official Job Title: Junior Game Systems Designer)

- Contributed to product strategy and roadmap development in collaboration with UX, design, and engineering teams, supporting delivery of 70+ features and characters across three 2D card games and one 3D project.
- Defined product requirements including character and scene specifications, activity mechanics, and gameplay systems. Reviewed delivered assets against specifications, producing 110+ structured feedback slide decks to ensure cross-functional alignment and implementation quality aligned with intended product experience.
- Designed and implemented a project management system featuring a BI dashboard and Grok API-integrated automated reporting pipeline, improving reporting efficiency by 50–60%.
- Ran QA testing and maintained defect logs, identifying product gaps and feeding findings into requirement refinement and iteration planning.
- Proposed feature changes and new feature ideas based on user, competitor, and market research.
- Leveraged Claude Code AI tooling across daily workflows including requirement documentation and visual reference generation.
- Contributed to the successful launch and early live performance of three card game titles, supporting revenue generation from month one through iteration and optimisation.

Frontend Engineering Intern - 2Toucans

Jun 2024 - Sep 2024 | London, UK

2Toucans is a digital agency providing UX design, web development, and digital marketing solutions

- Built responsive layouts using CSS media queries and modern layout systems (Flexbox/Grid), ensuring seamless cross-device compatibility and a consistent UX for desktop, tablet, and mobile users.
- Contributed to functional and regression testing using browser developer tools; isolated, documented, and resolved front-end rendering bugs to optimize cross-browser performance.

PROJECT EXPERIENCE

Machine Learning-Powered Sketch-to-Art Web Application

Dec 2024

- Independently scoped and developed an end-to-end AI-powered sketch-to-art web application, owning product definition, prioritisation, and interaction design from concept through development.
- Led three core workstreams including model tuning (Stable Diffusion fine-tuning and parameter optimisation), UI/UX design, and full frontend development in HTML, CSS, and JavaScript to deliver a complete user-facing experience.

Independent Game Project

Jan 2023

- Independently scoped and developed an end-to-end game project, owning full production pipeline including game design, UX and interaction logic, visual asset creation, and Unity development.
- Conducted structured playtesting sessions with 6–8 users, using feedback to iterate on core gameplay flow and narrative structure to improve overall player experience.

EDUCATION

University of the Arts London

MSc Creative Computing

London, UK | Oct 2023 - Feb 2025

- Grade: *Distinction*
- Modules: Machine Learning, Human-Computer Interaction, Game Development, Physical Computing

Wuhan College

BA Environmental Design

Wuhan, China | Sep 2019 - Jun 2023

- Grade: *91.66 (1st)*
- Recipient of China's Highest-level Scholarship

ADDITIONAL INFORMATION

Design & Product Tools: Figma, Adobe Photoshop & Illustrator, Cinema 4D, SketchUp, TouchDesigner, Auto CAD

Technical & Development Skills: Python, JavaScript, HTML, CSS, Arduino IDE, Unity
